

Client Identification

Client's Name: Sadeed Ahmad

Client's Email: SAHMAD340ESC@wfgmail.ca

Profession: Independent Financial Consultant

Professional Status: Independent Financial Consultant affiliated with World Financial Group (WFG)

Type of Solution: Company-based

Organization Affiliation: World Financial Group (WFG)

Client Background:

The client is an independent financial consultant who provides services such as retirement planning, investment guidance, insurance advising, and financial goal planning. The consultant works with individual clients and families, scheduling multiple meetings weekly to discuss financial strategies and long term planning.

Problem Description

A local independent financial consultant currently manages client appointments and follow-up communication manually through phone calls, emails, and personal calendar reminders. While this method works for small workloads, it becomes inefficient as the number of clients increases. Based on discussion with the client, he has expressed increasing difficulty managing appointments and follow-ups as his workload continues to grow. Clients occasionally forget scheduled meetings due to the lack of automated reminders, leading to missed appointments and wasted time.

For example, if a client forgets an investment review meeting or fails to submit required documents on time, it may delay important financial decisions. This can create frustration for both the consultant and the client, reducing overall efficiency. Additionally, follow-up communication after consultations is inconsistent, as there is no centralized system to track meeting outcomes, pending documentation, or next steps.

Because financial consultations involve sensitive personal and financial information, maintaining organized and secure communication is essential. The absence of a structured digital system creates risks related to data management, efficiency, and client engagement. Manual tracking methods also increase the possibility of human error.

There is a clear need for a secure and efficient digital solution that can automate meeting reminders, track follow-up activities, and organize client interaction records while ensuring strong data privacy and security standards appropriate for financial services.
